Turner Whitted

July 1983 **ACM SIGGRAPH Computer Graphics , Proceedings of the 10th annual conference on Computer graphics and interactive techniques**, Volume 17 Issue 3Full text available:  [pdf\(752.77 KB\)](#)Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

This algorithm draws lines on a gray-scale raster display by dragging a "brush" along the path of the line. The style of the line is determined by the properties of the brush. An anti-aliasing calculation is performed once for the brush itself and thereafter only a trivial additional operation is needed for each pixel through which the brush is dragged to yield an anti-aliased line. There are few constraints on the size, shape, and attributes of the brush. Lines can b ...

**Keywords:** Anti-aliasing, Filtering, Line drawing, Painting, Raster display**3 Texture mapping 3D models of real-world scenes**

Frederick M. Weinhaus, Venkat Devarajan

December 1997 **ACM Computing Surveys (CSUR)**, Volume 29 Issue 4Full text available:  [pdf\(1.98 MB\)](#)Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#), [review](#)

Texture mapping has become a popular tool in the computer graphics industry in the last few years because it is an easy way to achieve a high degree of realism in computer-generated imagery with very little effort. Over the last decade, texture-mapping techniques have advanced to the point where it is possible to generate real-time perspective simulations of real-world areas by texture mapping every object surface with texture from photographic images of these real-world areas. The techniqu ...

**4 Hardware acceleration for Window systems**

D. Rhoden, C. Wilcox

July 1989 **ACM SIGGRAPH Computer Graphics , Proceedings of the 16th annual conference on Computer graphics and interactive techniques**, Volume 23 Issue 3

Full text available:  pdf(1.81 MB)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Graphics pipelines are quickly evolving to support multitasking workstations. The driving force behind this evolution is the window system, which must provide high performance graphics within multiple windows, while maintaining interactivity. The virtual graphics system presented by [7] provides a clean solution to the problem of context switching graphics hardware between processes, but does not solve all the problems associated with sharing graphics pipelines. The primary difficulty in context ...

July 1982 **ACM SIGGRAPH Computer Graphics , Proceedings of the 9th annual conference on Computer graphics and interactive techniques**, Volume 16 Issue 3

Full text available:  pdf(672.09 KB)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

In this paper we present a conceptual model of raster graphics systems which integrates, at a suitable level of abstraction, the major features found in both contemporary and anticipated graphics systems. These features are the refresh buffer; the image creation (scan-conversion) system; the single address-space architecture which integrates the address space of the refresh buffer with those of the image creation system and the associated general-purpose computer; the RasterOp or BitBlt ins ...

**9 LoD Volume Rendering of FEA Data**

Shyh-Kuang Ueng, Yan-Jen Su, Chi-Tang Chang

October 2004 **Proceedings of the conference on Visualization '04**

Full text available:  pdf(345.15 KB)

Additional Information: [full citation](#), [abstract](#)

In this article, a new multiple resolution volume rendering method for Finite Element Analysis (FEA) data is presented. Our method is composed of three stages: At the first

stage, the Gauss points of the FEA cells are calculated. The function values, gradients, diffusions, and influence scopes of the Gauss points are computed. By representing the Gauss points as graph vertices and connecting adjacent Gauss points with edges, an adjacency graph is created. The adjacency graph is used to represent ...

**11 Session P9: interactive volume rendering: RTVR: a flexible java library for interactive volume rendering**

Lukas Mroz, Helwig Hauser

October 2001 **Proceedings of the conference on Visualization '01**

Full text available: [pdf\(2.08 MB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)  
[Publisher Site](#)

This paper presents several distinguishing design features of RTVR - a Java-based library for real-time volume rendering. We describe, how the careful design of data structures, which in our case are based on voxel enumeration, and an intelligent use of look-up tables enable interactive volume rendering even on low-end PC hardware. By assigning voxels to distinct objects within the volume and by using an individual setup and combination of look-up tables for each object, object-aware rendering i ...

**12 Designing SoCs for yield improvement: Using embedded FPGAs for SoC yield improvement**

Miron Abramovici, Charles Stroud, Marty Emmert

June 2002 **Proceedings of the 39th conference on Design automation**

Full text available: [pdf\(200.31 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

In this paper we show that an embedded FPGA core is an ideal host to implement infrastructure IP for yield improvement in a bus-based SoC. We present methods for testing, diagnosing, and repairing embedded FPGAs, for which complete testability is achieved without any area overhead or performance degradation. We show how an FPGA core can provide embedded testers for other cores in the SoC, so that cores designed to be tested with external vectors can be tested with BIST, and the entire SoC can be ...

**13 Mesh parameterization: PolyCube-Maps**

Marco Tarini, Kai Hormann, Paolo Cignoni, Claudio Montani

August 2004 **ACM Transactions on Graphics (TOG)**, Volume 23 Issue 3

Full text available: [pdf\(705.83 KB\)](#) [mov\(22:44 MIN\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Standard texture mapping of real-world meshes suffers from the presence of seams that need to be introduced in order to avoid excessive distortions and to make the topology of the mesh compatible to the one of the texture domain. In contrast, cube maps provide a mechanism that could be used for seamless texture mapping with low distortion, but only if

the object roughly resembles a cube. We extend this concept to arbitrary meshes by using as texture domain the surface of a *polycube* whose ...

#### **14 Polyhedral subdivision methods for free-form surfaces**

Ahmad H. Nasri

January 1987 **ACM Transactions on Graphics (TOG)**, Volume 6 Issue 1

Full text available: [pdf\(2.97 MB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#), [review](#)

One of the central issues in computer-aided geometric design is the representation of free-form surfaces which are needed for many purposes in engineering and science. Several limitations are imposed on most available surface systems: the rectangularity of the network describing a surface and the manipulation of surfaces without regard to the volume enclosed are examples. Polyhedral subdivision methods suggest themselves as a solution to these problems. Their use, however, is not widespread ...

#### **15 Continuous tone representation of three-dimensional objects illuminated by sky light**

Tomoyuki Nishita, Eiichiro Nakamae

August 1986 **ACM SIGGRAPH Computer Graphics , Proceedings of the 13th annual conference on Computer graphics and interactive techniques**, Volume 20 Issue 4

Full text available: [pdf\(3.81 MB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Natural lighting models to date have been limited to calculation of direct sunlight. However, this paper proposes an improved model for natural lighting calculations that adequately considers both direct sunlight and scattered light caused by clouds and other forms of water vapor in the air. Such indirect natural light is termed skylight and can be an important factor when attempting to render realistic looking images as they might appear under overcast skies. In the proposed natural lighting mod ...

#### **16 Access methods for text**

Chris Faloutsos

March 1985 **ACM Computing Surveys (CSUR)**, Volume 17 Issue 1

Full text available: [pdf\(2.59 MB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#), [review](#)

This paper compares text retrieval methods intended for office systems. The operational requirements of the office environment are discussed, and retrieval methods from database systems and from information retrieval systems are examined. We classify these methods and examine the most interesting representatives of each class. Attempts to speed up retrieval with special purpose hardware are also presented, and issues such as approximate string matching and compression are discussed. A quali ...

#### **17 GI-cube: an architecture for volumetric global illumination and rendering**

Frank Dachille, Arie Kaufman

August 2000 **Proceedings of the ACM SIGGRAPH/EUROGRAPHICS workshop on Graphics hardware**

Full text available: [pdf\(650.91 KB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

The power and utility of volume rendering is increased by global illumination. We present a hardware architecture, GI-Cube, designed to accelerate volume rendering, empower volumetric global illumination, and enable a host of ray-based volumetric processing. The algorithm reorders ray processing based on a partitioning of the volume. A cache enables efficient processing of coherent rays within a hardware pipeline. We study the flexibility and performance of this new architecture using both ...

**Keywords:** hardware accelerator, volume processing, volume rendering, volumetric global

**18 Combinational logic synthesis for LUT based field programmable gate arrays**

Jason Cong, Yuzheng Ding

April 1996 **ACM Transactions on Design Automation of Electronic Systems (TODAES)**,

Volume 1 Issue 2

Full text available: [pdf\(628.91 KB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#), [review](#)

The increasing popularity of the field programmable gate-array (FPGA) technology has generated a great deal of interest in the algorithmic study and tool development for FPGA-specific design automation problems. The most widely used FPGAs are LUT based FPGAs, in which the basic logic element is a K-input one-output lookup-table (LUT) that can implement any Boolean function of up to K variables. This unique feature of the LUT has brought new challenges to lo ...

**19 An information-theoretic approach to text searching in direct access systems**

Ian J. Barton, Susan E. Creasey, Michael F. Lynch, Michael J. Snell

June 1974 **Communications of the ACM**, Volume 17 Issue 6

Full text available: [pdf\(573.13 KB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Using direct access computer files of bibliographic information, an attempt is made to overcome one of the problems often associated with information retrieval, namely, the maintenance and use of large dictionaries, the greater part of which is used only infrequently. A novel method is presented, which maps the hyperbolic frequency distribution of text characteristics onto a rectangular distribution. This is more suited to implementation on storage devices. This method treats tex ...

**1 View interpolation for image synthesis**

Shenchang Eric Chen, Lance Williams

September 1993 **Proceedings of the 20th annual conference on Computer graphics and interactive techniques**Full text available: [pdf\(2.18 MB\)](#) Additional Information: [full citation](#), [references](#), [citations](#), [index terms](#)**Keywords:** image morphing, incremental rendering, interpolation, motion blur, motion compensation, real-time display, shadow, virtual holography, virtual reality**2 Heads, faces, hair: FacEMOTE: qualitative parametric modifiers for facial animations**

Meeran Byun, Norman I. Badler

July 2002 **Proceedings of the 2002 ACM SIGGRAPH/Eurographics symposium on Computer animation**Full text available: [pdf\(406.87 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#)

We propose a control mechanism for facial expressions by applying a few carefully chosen parametric modifications to pre-existing expression data streams. This approach applies to any facial animation resource expressed in the general MPEG-4 form, whether taken from a library of preset facial expressions, captured from live performance, or entirely manually created. The MPEG-4 Facial Animation Parameters (FAPs) represent a facial expression as a set of parameterized muscle actions, given as inte ...

**Keywords:** MPEG, animation systems, facial animation**3 Active pages: a computation model for intelligent memory**

Mark Oskin, Frederic T. Chong, Timothy Sherwood

April 1998 **ACM SIGARCH Computer Architecture News , Proceedings of the 25th annual international symposium on Computer architecture**, Volume 26 Issue 3Full text available: [pdf\(1.58 MB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)  
[Publisher Site](#)

Microprocessors and memory systems suffer from a growing gap in performance. We introduce *Active Pages*, a computation model which addresses this gap by shifting data-intensive computations to the memory system. An Active Page consists of a page of data and a set of associated functions which can operate upon that data. We describe an implementation of Active Pages on RADram (Reconfigurable Architecture DRAM), a memory system based upon the integration of DRAM and reconfigurable logic. Res ...

**4****Configuration cloning: exploiting regularity in dynamic DSP architectures**

5 Multiway FPGA partitioning by fully exploiting design hierarchy

Wen-Jong Fang, Allen C.-H. Wu

January 2000 **ACM Transactions on Design Automation of Electronic Systems  
(TODAES)**, Volume 5 Issue 1

Full text available:  pdf(130.36 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

In this paper, we present a new integrated synthesis and partitioning method for multiple-FPGA applications. Our approach bridges the gap between HDL synthesis and physical partitioning by fully exploiting the design hierarchy. We propose a novel multiple-FPGA synthesis and partitioning method which is performed in three phases: (1) fine-grained synthesis, (2) functional-based clustering, and (3) hierarchical set-covering partitioning. This method first synthesizes a design specification in ...

**Keywords:** fine-grained synthesis, functional clustering, multi-way partitioning, multiple-FPGA synthesis

6 Quality-Driven Proactive Computation Elimination for Power-Aware Multimedia

Processing

Shrirang M. Yardi, Michael S. Hsiao, Thomas L. Martin, Dong S. Ha

March 2005 **Proceedings of the conference on Design, Automation and Test in Europe -  
Volume 1**

Full text available:  pdf(218.74 KB) Additional Information: [full citation](#), [abstract](#)

We present a novel, quality-driven, architectural-level approach that trades-off the output quality to enable power-aware processing of multimedia streams. The error tolerance of multimedia data is exploited to selectively eliminate computation while maintaining a specified output quality. We construct relaxed, synthesized power macro-models for power-hungry units to predict the cycle-accurate power consumption of the input stream on the fly. The macro-models, together with an effective quality ...

7 Enhancing nonverbal human computer interaction with expression recognition

Kostas Kar pouzis, Nicolas Tsapatsoulis, Amaryllis Raouzaiou, George Moschovitis, Stefanos Kollias

June 2000 **ACM SIGCAPH Computers and the Physically Handicapped**, Issue 67

Full text available:  pdf(624.09 KB) Additional Information: [full citation](#), [abstract](#), [references](#)

This paper describes an integrated system for human emotion recognition, which is used to provide feedback about the relevance or impact of the information that is presented to the user. Other techniques in this field extract explicit motion fields from the areas of interest and classify them with the help of templates or training sets; the proposed system, however, compares indication of muscle activation from the human face to data taken from similar actions of a 3-d head model. This compariso ...

8 System partitioning and timing analysis: Design of multi-tasking coprocessor control for  
Eclipse

Martijn J. Rutten, Jos T. J. van Eijndhoven, Evert-Jan D. Pol

May 2002 **Proceedings of the tenth international symposium on Hardware/software  
codesign**

Full text available:  pdf(646.07 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Eclipse defines a heterogeneous multiprocessor architecture template for data-dependent stream processing. Intended as a scalable and flexible subsystem of forthcoming media-processing systems-on-a-chip, Eclipse combines application configuration flexibility with the

efficiency of function-specific hardware, or coprocessors. To facilitate reuse, Eclipse separates coprocessor *functionality* from generic support that addresses multi-tasking, inter-task synchronization, and data transport. Fi ...

**9 Case studies in embedded systems: A fast parallel reed-solomon decoder on a reconfigurable architecture**

Arezou Koohi, Nader Bagherzadeh, Chengzi Pan

October 2003 **Proceedings of the 1st IEEE/ACM/IFIP international conference on Hardware/software codesign and system synthesis**

Full text available: pdf(292.18 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

This paper presents a software implementation of a very fast parallel Reed-Solomon decoder on the second generation of MorphoSys reconfigurable computation platform, which is targeting on streamed applications such as multimedia and DSP. Numerous modifications of the first-generation of the architecture have made a scalable computation and communication intensive architecture capable of extracting parallelisms of fine grain in instruction level. Many algorithms and the whole Digital Video Broadc ...

**10 Synchroscalar: A Multiple Clock Domain, Power-Aware, Tile-Based Embedded Processor**

John Oliver, Ravishankar Rao, Paul Sultana, Jediah Crandall, Erik Czernikowski, Leslie W. Jones IV, Diana Franklin, Venkatesh Akella, Frederic T. Chong

March 2004 **ACM SIGARCH Computer Architecture News , Proceedings of the 31st annual international symposium on Computer architecture ISCA '04**, Volume 32 Issue 2

Full text available: pdf(286.10 KB) Additional Information: [full citation](#), [abstract](#)

We present Synchroscalar, a tile-based architecture forembedded processing that is designed to provide the flexibilityof DSPs while approaching the power efficiency ofASICs. We achieve this goal by providing high parallelism and voltage scaling while minimizing control and communication costs. Specifically, Synchroscalar uses columns of processor tiles organized into statically-assignedfrequency-voltage domains to minimize power consumption. Furthermore, while columns use SIMD control to minimize ove ...

**11 Interactive three-dimensional holographic displays: seeing the future in depth**

Mark Luente

May 1997 **ACM SIGGRAPH Computer Graphics**, Volume 31 Issue 2

Full text available: pdf(545.74 KB) Additional Information: [full citation](#), [abstract](#), [citations](#), [index terms](#)

Computer graphics is confined chiefly to flat images. Images may look three-dimensional (3D), and sometimes create the illusion of 3D when displayed, for example, on a stereoscopic display [16, 13, 12]. Nevertheless, when viewing an image on most display systems, the human visual system (HVS) sees a flat plane of pixels. Volumetric displays can create a 3D computer graphics image, but fail to provide many visual depth cues (e.g. shading texture gradients) and cannot provide the powerful depth cu ...

**12 A generic approach for interfacing VRML browsers to various input devices and creating customizable 3D applications**

Frank Althoff, Herbert Stocker, Gregor McGlaun, Manfred K. Lang

February 2002 **Proceeding of the seventh international conference on 3D Web technology**

Full text available: pdf(266.82 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

In this work we present a generic architecture for interfacing various input devices to VRML browsers. Concentrating on the aspect of navigation, our system supports the full range of potential input devices from conventional haptic devices like keyboard and mouse over special Virtual-Reality devices like spacemouse and joystick to, as a special feature, semantically higher level input like speech and gesture recognition. The communication

between the individual components of the system is based ...

**13 Network processors: a perspective on market requirements, processor architectures and embedded S/W tools**

P. Paulin, F. Karim, P. Bromley

March 2001 **Proceedings of the conference on Design, automation and test in Europe**

Full text available:  [pdf\(269.19 KB\)](#) Additional Information: [full citation](#), [references](#), [citations](#), [index terms](#)

**14 Design and Analysis of a Programmable Single-Chip Architecture for DVB-T Base-Band Receiver**

Chengzhi Pan, Nader Bagherzadeh, Amir Hosein Kamalizad, Arezou Koohi

March 2003 **Proceedings of the conference on Design, Automation and Test in Europe - Volume 1 DATE '03**

Full text available:  [pdf\(342.20 KB\)](#) Additional Information: [full citation](#), [abstract](#), [index terms](#)

 [Publisher Site](#)

This work treats the design and analysis of a programmable (or reconfigurable) DSP-domain-specific architecture called MorphoSys, upon which world's first single-chip software solution for DVB-T base-band receiver can be implemented. Based on the first version of MorphoSys, many modifications have been made to improve greatly both computation power and data movement efficiency. Sequential codes and SIMD codes can be parallelized; temporal granularity adjustment boosts up performance up to 4 time ...

**15 Computation techniques for FPGAs: An FPGA-based VLIW processor with custom hardware execution**

Alex K. Jones, Raymond Hoare, Dara Kusic, Joshua Fazekas, John Foster

February 2005 **Proceedings of the 2005 ACM/SIGDA 13th international symposium on Field-programmable gate arrays**

Full text available:  [pdf\(220.52 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

The capability and heterogeneity of new FPGA (Field Programmable Gate Array) devices continues to increase with each new line of devices. Efficiently programming these devices is increasing in difficulty. However, FPGAs continue to be utilized for algorithms traditionally targeted to embedded DSP microprocessors such as signal and image processing applications. This paper presents an architecture that combines VLIW (Very Large Instruction Word) processing with the capability to introduce applicat ...

### 1 A code-motion pruning technique for global scheduling

Luiz C. V. Dos Santos, M. J. M. Heijligers, C. A. J. Van Eijk, J. Van Eijnhoven, J. A. G. Jess  
 January 2000 **ACM Transactions on Design Automation of Electronic Systems (TODAES)**, Volume 5 Issue 1

Full text available: [pdf\(293.27 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

In the high-level synthesis of ASICs or in the code generation for ASIPs, the presence of conditionals in the behavioral description represents an obstacle to exploit parallelism. Most existing methods use greedy choices in such a way that the search space is limited by the applied heuristics. For example, they might miss opportunities to optimize across basic block boundaries when treating conditional execution. We propose a constructive method which allows generalized code motions. Schedu ...

## **8 Dynamic Functional Unit Assignment for Low Power**

Steve Haga, Natasha Reeves, Rajeev Barua, Diana Marculescu

A hardware method for functional unit assignment is presented, based on the principle that a functional unit's power consumption is approximated by the switching activity of its inputs. Since computing the Hamming distance of the inputs in hardware is expensive, only a portion of the inputs are examined. Integers often have many identical top bits, due to sign extension, and floating points often have many zeros in the least significant digits, due to the casting of integer values into floating ...
